

ELECTRIC PROPULSION

Embrace nature with silent and eco-friendly boating

VETUS E-DRIVE solutions
E-POD | E-LINE AIR | E-LINE

Enjoy an exceptional boating experience

Electric boats are not just better for the environment, there are more reasons in favour of electric mobility - from cutting-edge technology to more genuine moments in nature.

MAKE THE SWITCH AND GO ELECTRIC WITH VETUS

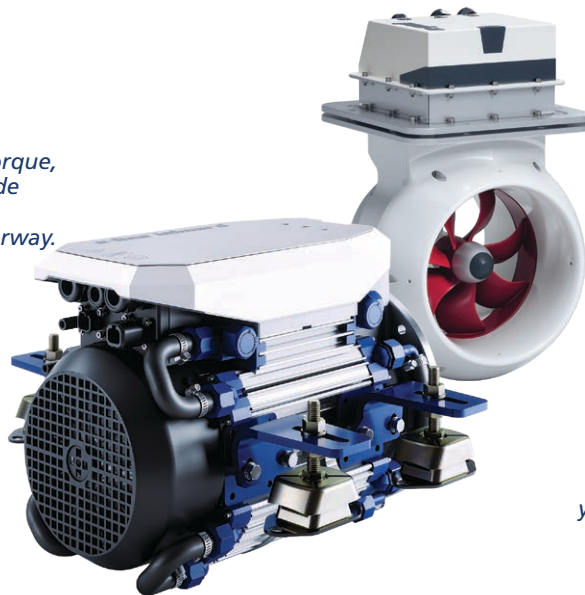

VETUS' view of electric boating is compact, complete, very efficient, plug & play and suitable for both new and existing vessels.

COMPLETE SYSTEM READY TO INSTALL

VETUS E-DRIVE sets include all key components such as motor, cables, and standard monitoring devices. It's a complete system out-of-the-box, only to be completed with the control lever of your choice.

Boating made better: With instant torque, VETUS E-DRIVE powered boats provide smooth, responsive acceleration, and immediate deacceleration once underway.

Smart sailing: Modular, fully integrated, self-monitoring, and engineered for ease of use. Smart functions abound with VETUS systems.

Refit and installation made easy: Designed to be compact and easy to install, VETUS E-DRIVES can be mounted on almost every existing engine foundation.

More affordable than you think: VETUS electric motors are simple and efficient by design, which means you can reduce your everyday running expenses with less maintenance and lower operation costs.

Ready for green zones

More and more areas are becoming green zones, with only electric boats allowed. Boating with an electric-powered vessel gives you superior mobility and true freedom to go wherever you desire.

E-PROPULSION SOLUTIONS TO RELY ON

The boating experience of a VETUS electric motor is in many aspects superior than that of an internal combustion engine. Emission-free, peacefully quiet, powerful and responsive. And don't forget: a boatload of high-tech fun. A more efficient and future-proof boating experience starts with a VETUS E-DRIVE.

■ E-POD

The E-POD combines the motor, mounts, cooling system, gearbox, clutch, propeller shaft, and propeller **all into one complete package**. A true space-saving solution to enable completely new boat designs.

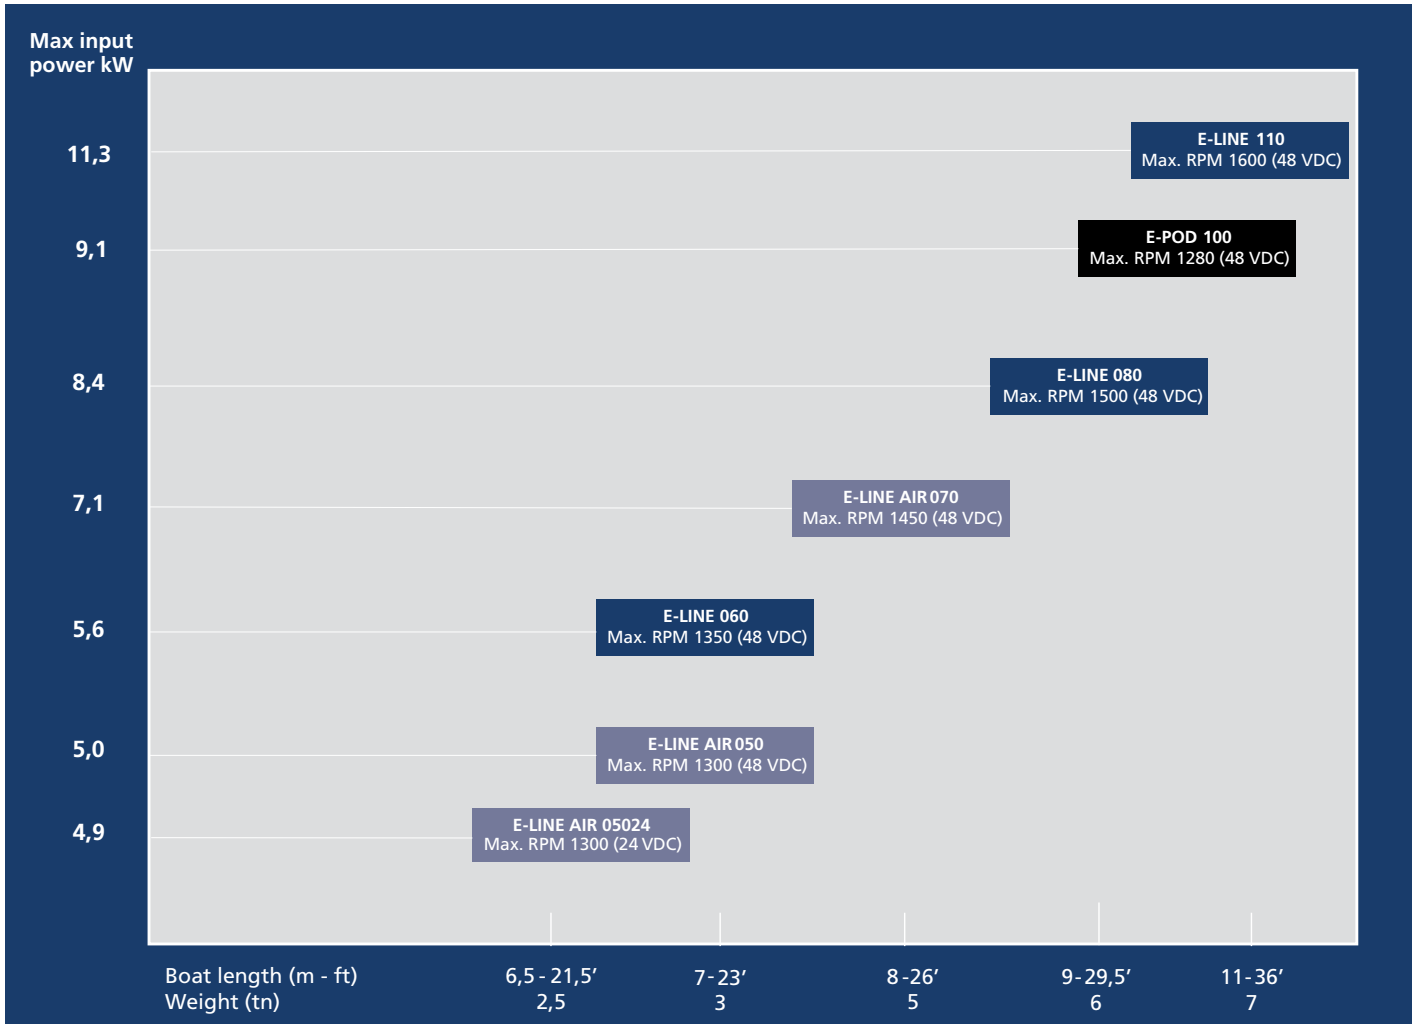

■ E-LINE AIR

Featuring an **optimized design** with less components, the E-LINE AIR is even more compact and lightweight than a standard liquid-cooled system. Engineered to use natural air as cooling agent, these E-DRIVES reliably dissipate heat without the need of additional cooling equipment.

■ E-LINE

Born with a slim design and a **highly efficient motor management system**, the E-LINE is the best-in-class when power, speed, control, and comfort are in your plans!

CONTROLS AND MONITORING

Your boat, your choice. VETUS has developed different options for controls and monitoring devices to enhance your boating experience.

Model	Description
ELPS2	Side-mounted, aluminum control lever
ELPSR	Side-mounted, aluminum control lever for rental boats
ELCS	Side-mounted, stainless-steel control lever with premium finishing
CANNME7	Multifunctional 7" display
EDN2K7	Monitoring set including CANNME7 display, CANN500 battery monitoring shunt, CANV2N Converter, and all required cables, and hubs
MPE1MBV*	Analog monitoring panel
MPE1KB*	Key switch

* Standard supplied with all E-DRIVE motors

BATTERIES

VETUS batteries allow boaters an affordable setup, and are designed with consideration of varying seasonal demands. With a minimal rate of self-discharge in winter, they can still be relied on when the boating season starts.

Model	Description	Typical life span
Deep Cycle Marine Battery	Highly suitable for VETUS E-DRIVES	5 - 6 years
AGM Marine Battery	Suitable for VETUS E-DRIVES	6 - 8 years

Global Network

With the widest dealer and technical assistance network, we got you covered wherever you happen to be sailing.

Service and Warranty

Industry-leading service and support with 3 year warranty on all E-DRIVE equipment.
